                                                                                                                     q
                                                                                                                                             à
                                                                                                                                            AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polymucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased cample, they may be used to treat disorders associated with decreased that affect the activity of (I) by expression in a patient's genome that affect the activity of (I) by expressing inactive proteins or to polymucleotides may be used to production of (I). Additionally, (I) colymucleotides may be used to produce the secreted (I), by inserting the mucleic acids into a host cell and culturing the cell to express the coldispose and freat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic antigen genomic cancers and cancer metastases of haematopoietic antigen genomic sequences from the present invention. AAK54942 to AAK87690 and AAM82169 crepresent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                             1494

The present invention relates to the isolation of novel human enzyme polypeptides (AAU22915-AAU33814), and the cDNA and genomic sequences polypeptides (fareation may comprise the encoding them. The enzyme polypeptides of the invention may comprise the functional classes of oxidoreductases, transferases, hydrolases, lyases, commerases or ligases. The sequences of the invention are useful in the diagnosis, transfertle or prognosis of a wide range of diagnosis, transferation and/or prognosis of a wide range of diagnosis, transferation and/or prognosis of a wide range of clastication disorders (e.g. and sequences), metabolic architis), neurological disorders (e.g. Alzheimer's disorders (e.g. architis), neurological disorders (e.g. Alzheimer's disorders (e.g. architis), cardiovascular disorders (e.g. atherosclerosis), blood-related disorders (e.g. the momophilia), reproductive disorders (e.g. infertility) and cardiovascular disorders (e.g. Influences). The polymucleotides of the infectious disorders (e.g. Influence) human enzyme polypeptides of the convention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly communication. The printed specification, but was obtained in electronic format directly communications.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel polypeptides and polynucleotides useful for diagnosing, preventing, treating neural, immune system, muscular, reproductive, pulmonary, cardiovascular, renal, proliferative disorders and cancerous diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 1122 BP; 330 A; 247 C; 260 G; 285 T; 0 U; 0 Other;

Novel polypeptides and polymucleotides useful for diagnosing, preventing, treating neural, immune system, muscular, reproductive, pulmonary, cardiovascular, renal, proliferative disorders and cancerous diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to the isolation of novel human enzyme polypeptides (AAU22915-AAU23814), and the cDNA and genomic sequences encoding them. The enzyme polypeptides of the invention may comprise the functional classes of oxidoreductases, transferases, hydrolases, lyases, isomerases or ligases. The sequences of the invention are useful in the diagnosis, treatment, prevention and/or prognosis of a wide range of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 4; SEQ ID NO 839; 1180pp; English

The invention relates to an isolated human protease nucleic acid molecule comprising a nucleotide sequence of 546 base pairs, one of 268 fully defined in the specification. Also disclosed are production of an inclaim of a complex of the nucleic acid, comprising introducing the nucleic acid into a host cell and culturing under conditions to the nucleic acid into a host cell and culturing under conditions to the nucleic acid into a host cell and culturing under conditions to the nucleic acid into a host cell and culturing under conditions to the protein from the nucleic acid, use of an artipody to detect identifying agents that bind to the protein and identification of a cits complement (i.e. gene therapy). The nucleic acid can be used to isolate the protein. The nucleic acid or identify an agent that modulates the expression of activity of the can be used in diagnostic assays for determining nucleic acid expression as activity in the context of a biological sample (e.g., blood, disorder, or is at risk of developing a disease or disorder, associated acid can be used to detect mutations in protease genes and gene context of disorder, or is at risk of developing a disease or disorder, associated acid can be used to detect mutations in protease genes and gene context of disorders such as mRNA. The nucleic acid can be used as protease gene. The nucleic acid can be used to distance mediated disorders that can be used to dispense mediated disorders that can be used to dispense mediated disorders the nucleic acid can be used to developmental or haematopoletic disorders. The nucleic acid can be used as probes, primers, in biological assays, to determine patterns of gene expression, to design ribozymes and to construct transgenic animals. The ion, to determine patterns of generation to determine patterns of gene sequence represents one of the 268 disclosed human G-protein-protesses chan sequence.

fu]] length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length Primer sets for synthesizing polynucleotides, particularly the 5602 Yamamoto J; Saito K, , Otsuki hikawa T, Hayashi K, S Wakamatsu A, Nagai K, WPI; 2001-318749/34.

Claim 1; SEQ ID NO 2494; 2537pp + Sequence Listing; English.

The present invention describes primer sets for synthesising 5602 full-length CDNAs defined in the specification. Where a primer set comprises:

(a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination

```
complementary strand of a polymucleotide which comprises a 5'-end complementary strand of a polymucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to a sequence and an oligonucleotide comprises a 3'-end sequence, where the polymucleotide comprises a 1'-end sequence, where the combination of the 5'-end sequence3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in specification. The primers are useful for synthesising polymucleotides, gene therapy. The primers are useful for synthesising polymucleotides, comparate therapy. The primers also useful for the primers are also useful for the the full-length cDNAs. The primers also when several seconded by the full-length cDNAs. The primers also what ining of the full-length cDNAs. The primers also what some exceeded by the full-length cDNAs. The primers also what some seconded by the full-length cDNAs. The primers also what seven the full-length cDNAs represent human care assist that sequences; AAB92446 to AAB95893 configurations amino acid sequences; and AAH13629 to AAH13628 and configuration desamples all of which are used in the exemplification of the

Sequence 223, Application US/09280116A
Patent No. 6331427
GENERAL INFORMATION.
APPLICANT: Robison, Keith E.
TITLE OF INVENTION: Nucleic Acid Molecules Encoding Human Protease Homologs
FILE REFERENCE: 5800-24, 035800/176965
CURRENT APPLICATION NUMBER: US/09/280,116A
NUMBER OF SEQ ID NOS: 268
SOFTHAME: Patentin Ver. 2.0

US-09-280-116-223

OTHER INFORMATION: ubiquitin carboxyl-terminal hydrolases family 2

TYPE: DNA ORGANISM: Homo sapiens

FEATURE:

SEQ ID NO 223 LENGTH: 722

or O

NAME/KBY: misc_feature; LOCATION: (1)...(722)
